The vegetables may be: tomatoes, eggs 262
plants, squash, peppers, corn, beans, camote, gabi, or [244
yams. Fruits may be: bananas, coconuts, pineapples, 245]
jack fruit, oranges, lemons, guavas, melons, *lucban*,
mangoes, or papaya. The beverages may be: coffee, [272]
cocoa, or water. Honey is included in the diet. From [263]
sugar cane are produced candied fruits and vegetables,
molasses, *basi*, and vinegar. A strong tobacco is raised 276
and smoked—sometimes in a small pipe; but generally
one leaf is rolled into a small cigar. Both men and
women smoke. Boys and girls start smoking at an
early age.

In growing these things, the people do not use ir- 311
rigation; but follow the *kaiñgin* method of farming. 241
A suitable piece of wild land is selected. The vegetation [312]
is cut down, allowed to dry, and then burnt. Seeds
are planted in the ashen earth by making a hole with
a sharp stick and dropping a seed in it The plot is [317]
is enclosed with a bamboo fence. The men clear and [462]
fence the land, while the women do much of the rest
of the work. In two years the soil has become leached
and packed by the heavy tropical rains and so sterile
that a new *kaiñgin* is made elsewhere.

The rice is an upland variety which does not re- 243
quire much water. The seeds are planted during the
beginning of the rainy season in April and May. When
ripe, the heads are cut off by hand, using a miniature
aliwa. These heads are gathered into bundles, tied, and [25]
then stored in a specially built square granary whose 343
architectural design follows that of the house. Tobacco 249
and vegetables are usually planted during January af- 244
ter the harvest, in the *kaiñgins* where rice was grown.

When the woman wishes some rice to cook, she 252
threshes several bundles on a mat or skin with a club; 412
